

Import Data using Transform Maps

Customer Journey Map – Spreadsheet to ServiceNow

PERSONA

ServiceNow Administrator (HR data admin)

Receives bulk employee data in Excel for onboarding and updates and must load it accurately, without duplicates.

SCENARIO

Loading, mapping, transforming and reporting on employee data from a spreadsheet

Entice

How does someone initially become aware of this process?

Enter

What do people experience as they begin the process?

Engage

In the core moments in the process, what happens?

Exit

What do people typically experience as the process finishes?

Extend

What happens after the experience is over?

Steps

What does the person typically experience?

Receive employee spreadsheet from HR	Review rows: ID, Name, Email, Dept, Location	Download sheet as Sample Spreadsheet.xlsx	Create custom table Employee Test (u_employee_test)	Upload file to create Import Set (u_employee_import)	Create Transform Map & Auto Map fields	Open Employee Tests table & check records	Re-upload updated file & run Transform	Create 3 reports on Employee Test	Build Employee Analytics Dashboard
		Open System Import Sets > Load Data		Run Transform	Turn on Coalesce for Employee ID	Open Transform History		Share dashboard with HR	

Interactions

What do they touch, see or talk to?

Email / shared Google Sheet	Google Sheets	Google Sheets: File > Download	Tables > Create New; Form Layout	Load Data & Progress page	Transform Map form, Mapping Assist	Employee Tests list view	Load Data (existing table)	Reports > New (Pie, Bar, List)	PA_DASHBOARDS.FORM, Add to Dashboard
		Load Data form		Transform button	Field Maps related list	Transform Histories list		Share: users, groups, roles	

Goals & motivations

“Help me...” or “Help me avoid...”

Help me get all employee data into ServiceNow quickly	Help me prepare a proper place for the data	Help me avoid mistakes in setup	Help me map every column to the right field	Help me avoid duplicates on re-import	Help me confirm all records are correct	Help me see what was inserted vs updated	Help me show HR the employee distribution
---	---	---------------------------------	---	---------------------------------------	---	--	---

Positive moments

What is enjoyable, easy or delightful?

Data is already structured in rows & columns	Table needs only 5 simple String fields	Auto Map matches all 5 fields	Import: State Complete, Success – 15 records inserted	Re-import shows 2 inserts + 2 updates clearly	Same file again: 4 ignored, no duplicates	Pie, bar and list reports give instant insight	One dashboard view for HR
--	---	-------------------------------	---	---	---	--	---------------------------

Negative moments

What is frustrating, confusing or time-consuming?

Typing every record by hand looks slow & risky	Many navigation steps; easy to miss Form Layout	All 5 fields must be created one by one	Duplicates possible if Coalesce is off	Source “Name” vs target “Employee Name”	Transform must be re-run manually after every load	Dashboard form needs ACL Admin Overrides to open
--	---	---	--	---	--	--

Areas of opportunity

What ideas do we have to make each step better?

How might we load the whole sheet in one go?	How might we guide beginners with step-by-step screens?	How might we enable Coalesce by default?	How might we validate data before insert?	How might we auto-run the Transform after load?	How might we schedule reports to HR automatically?
